

## At Tover, we are serious about *play*

We use innovative serious games that fascinate and connect children. Our aim is to make life more beautiful and inclusive for children with special needs worldwide. Playing for a better existence. We call that: Purposeful play.

### The Tovertafel

The Tovertafel is an all-in-one serious game system that combines light projection technology with an infrared sensor, speaker, and software to display interactive games on any surface. With the Click-and-ready ceiling mount system, the Tovertafel is easy to install and move between rooms, meaning that any space can be quickly transformed into a vibrant playing field.

This warm technology helps teachers in special education promote an inclusive classroom in which everyone can participate and helps children connect to the world in their own way, practicing social-emotional skills and creating meaningful moments. The colorful, interactive projections keep children engaged and are incredibly fun!

### Multi-level gameplay

For children, growth comes first. That's why we offer games that support kids in special education in their development. Our serious games encourage children of different cognitive levels to play together, which helps them to practice important social-emotional skills. This way, kids learn from and with each other!

Our serious games also challenge players cognitively and physically. Some of our games promote language development or elementary mathematical skills, while other games encourage the players to get active. The Tovertafel brings a smile to everyone's face and helps all children to play and learn together.

#### More than 30 games to choose from,

The Tovertafel and its games are developed in co-design together with teachers, international experts, relatives, and the players themselves.

Meaning the games are tailored exactly to suit children's individual needs. The games also employ a no-fail, layered design, which means that participants can play according to their ability. This instills confidence and makes the games easy to enjoy at any level. They come in a variety of formats, each promoting physical movement, social interaction, and cognitive stimulation.

### Research

To ensure our solutions have the intended effects, we work closely with our players, education and healthcare professionals, family members, and other experts to understand the needs of our target groups. We also conduct research studies and collaborate with independent research partners to gain insight into the benefits of playing with our products and their effects on behavior and emotions.
