

A suicide prevention service built just for schools.

Identify students who are silently suffering, **alert** those who can help, and quickly **activate** your school's custom response plan.

Proactively delivers warning signs from ALL online activity

Unlike other solutions that focus primarily on G-Suite or Office365, Beacon works across all of the content your students are creating, searching for, and consuming online. This includes search engines, chat, online docs, social media, email, web apps, and more.

A trained team of human safety specialists, now available to support you

Beacon now offers the option to have a dedicated team of safety specialists review and escalate active planning alerts 24/7. These specialists operate within the U.S. and are specially trained to evaluate alerts.

Activates the appropriate responders

Beacon's robust and flexible alerting system can bring in the right school responders, help notify parents after hours, and even provide students directly with resources. Beacon can alert via email, text message, or phone (24/7 plan only).

Features & Benefits:

-  Monitors all content students engage with in their browser on a school-issued device.
-  Instantaneous alerts showing context, screenshots, and past activities for faster, more-informed responses.
-  Dedicated 24/7 safety specialists are available to support your team for active planning alerts.
